## Sunswitch

Smart,  
Simple,  
Sophisticated.

There are solar controllers and .... there's **Sunswitch**.

The solar controller is often overlooked, but it's perhaps the most important component in the entire solar pool heating system.

It's the brain of the solar system.

If its not working well, then the solar collector on the roof cannot work to capacity.

The easiest way to maximize the effectiveness of a solar heater is to install a quality controller.

The easiest way to lose heating efficiency is to install a second rate controller.

# Sunswitch is the iPod of solar pool heating. State-of-the-art electronics, produced and priced for the global market.

**And for the pool owner, there's nothing to compare with its host of unique features:**

SunSwitch not only looks better than all other controllers, it's also the simplest and yet smartest unit available:

- Intuitive controls are a breeze for the first time pool owner.
- No switches or knobs.
- All operation is through the screen.
- Choice of Auto, Manual & specialised modes.
- Built in protection against voltage drop and power surge.
- ESM (energy saving mode) prevents pump over-run and saves precious electricity.

And if you're ever stuck, an User Manual and comprehensive, inter-active DVD is included.

Highest spec German temperature sensors ensure that SunSwitch turns the system on when it should and turns it off when it should. With sensors this accurate, durable and reliable more solar heat ends up in the pool, not wasted on the roof, year after year.

**SunSwitch is the key to unlocking extra performance from your solar system.**

**And a wide range of innovative features are built in to make the service technician's life easier.**

For example:

- Self-diagnostic systems that project any fault onto the display screen.
- Automatic EEPROM testing.
- A powerful microchip that can be reprogrammed on site.
- Simple re-calibration to suit other pool products.
- Winter mode and tropical mode.
- Lightning filter and auto reboot.
- 4 Hour Lock-Out mode with Auto Reset allows for on site system repairs and maintenance.
- Switch Mode power supply and soft-start relay for greater reliability and less maintenance.
- Waterproof sensor connectors and in-line sensor wells included to prevent corrosion and ensure accurate readings.
- Quick release bracket mounting.
- Simple change-over from previous models.

Two year warranty that reflects total confidence in the product.

**And the best feature of all ... happy, satisfied customers.**
